

* Post Pruning and Pre Pruning : (Decision Tree)

Training dataset { max feature
max depth
split

Overfitting $\rightarrow$ low Bias
High Variance

Train Acc $\uparrow\uparrow$

Test Acc $\downarrow\downarrow$

Pruning

$\Rightarrow$ Hyperparameter

Reduce Overfitting

Post Pruning

1. Construct the Decision Tree
- II. Prune it with respect to depth
- III. Smaller datasets.

Pre Pruning:

- I. Hyperparameter Tuning
- II. while constructing Decision Tree.
