

* Types of ANOVA (3 Types):

1. One way ANOVA: One factor with atleast 2 levels, these levels are independent.

Eg: Doctor wants to test a new medication to decrease headache. They split the participants in 3 conditions [10mg, 20mg, 30mg]. Doctors ask participants to rate the headache [1-10].

medication $\rightarrow$ Factor

10 mg	20 mg	30 mg
5	7	2
3	4	6
-	-	-
-	-	-

2. Repeated Measure ANOVA: One factor with atleast 2 levels, levels are dependent.

Running $\rightarrow$ factor

levels $\rightarrow$	Day 1	Day 2	Day 3
	8	5	4
	7	4	9
	-	-	-

3. Factorial ANOVA: Two or more factor (each of with atleast) 2 levels, levels can be independent and dependent.

levels		Running $\rightarrow$ factor		
		Day 1	Day 2	Day 3
Gender $\downarrow$ factor	Male	8	5	4
		9	4	3
	Female	2	4	6
		7	8	3
