

* Ensemble Technique: Bagging and Boosting.

M-31

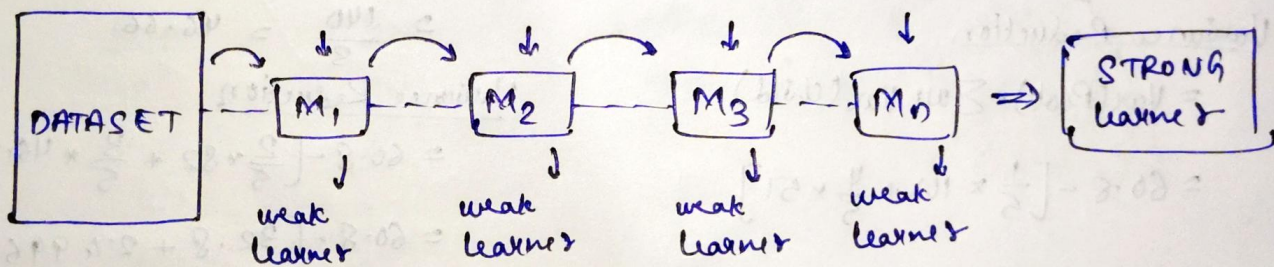

Bagging: 1. Random Forest Algorithm

Boosting:

1. AdaBoost
2. Gradient Boosting
3. Extreme Gradient Boosting (Xg Boost)

Idea Behind Boosting:

NOTE: They are connected sequentially.

In this pass the data to M_1 and then M_1 predict some wrong record and this record is passed to M_2 with some more records from the dataset and this process sequentially continues to n number of models.

(Combining multiple weak learners to form a Strong learner)
