

* SVM Kernels:

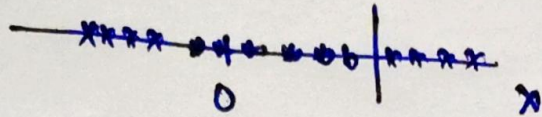

→ Transformations →

Mathematical Formula

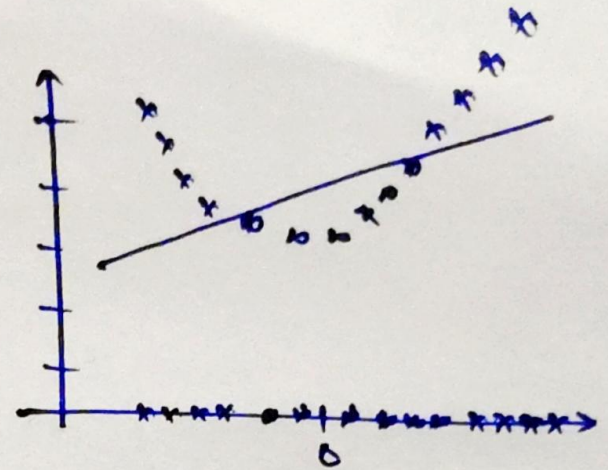

Dataset : 1D

SVC = Linear SVC $\Rightarrow$ Transformation
 $y = x^2$

Acc $\uparrow \uparrow$
Linear SVC

SVM kernel

- Type:
- i) Polynomial Kernel
 - ii) RBF Kernel
 - iii) Sigmoid Kernel

Note: Using Linear SVC we cannot solve the 1D problem

what are the transformation formula is basically applied to create new dimension is known as SVM model.
