

* Overfitting and Underfitting:- (Bias and Variance)

- i. Training dataset
- ii. Test dataset
- iii. Validation dataset.

Dataset - (1000 data points)

Size of House No. of bedrooms Price

Dataset

70% - 80%

1000 data points

→ TRAINING DATASET (700) → Model to TRAIN
→ TEST DATASET (300) → TESTING MODEL

TRAINING DATASET

TRAIN

VALIDATION

Train the model

Hyperparameter tuning your model.

TRAIN	Very Good Accuracy (90%) (low Bias)	Very Good Accuracy (90%) (low Bias)	Model Accuracy is low (high Bias)
TEST	Very Good Accuracy (95%) (low Variance)	Very low Accuracy (50%) (high variance)	Model Accuracy is low (high Variance)

Generalized Model

Model is overfitting

Model is underfitting
