Tokenization in NLP:

Topics

i. Corpus → Paragraph

ii. Documents → Sentences

iii. Vocabulary → Unique words

iv. words → All the words present in the corpus

Tokenization is a process of converting either a paragraph or a sentence into Tokens.

Converting paragraph into words or sentences.

Single-single words or paragraph become a token.

Tokenization corpus → { "My name is KRISH and I have interest in Teaching ML, NLP and DL. I am also a Youtuber".

↓ Tokens {sentences}

Tokenization words ← i. My name is KRISH and I have interest in Teaching ML, NLP and DL

ii. I am also a Youtuber.

[I like to drink Apple juice. My friend ~~likes~~ likes ~~to~~ ~~drink~~ Mango juice.]

↓ ~~Tokenization~~

~~Token~~ (sentences)

{ i. I like to drink Apple juice.
ii. My friend likes ~~to~~ ~~drink~~ Mango juice } → Unique words = 10 words

↓ 11 words

↓

Vocabulary.
